A chair of harmonious
form and function

Losing track of valuable belongings has become an all too common frustration. Recognizing this need, TrackR emerged as a pioneering company with a simple yet revolutionary solution – a compact device that enables users to locate their misplaced items with ease.

CREATIVE DIRECTION

WEB DESIGN
APP DESIGN
PACKAGING DESIGN

Background

As TrackR's technology continued to evolve, it became apparent that the existing web and app interfaces needed a significant overhaul. While the initial design had served its purpose, the changing landscape of user expectations and technological capabilities demanded a fresh approach. Users sought not only functional efficiency but also a more engaging, intuitive, and aesthetically pleasing experience.

Objective

When tasked to redesign TrackR's website the first step was to iterate on ideas quickly. The best way to do that was by wire-framing out the site and the message TrackR wanted to get across to potential customers. TrackR wanted to establish a web presence that would assert them as leaders in the tracking device space. It was important to showcase the sleek and stylish design of their Bravo device while showcasing relatable scenarios.

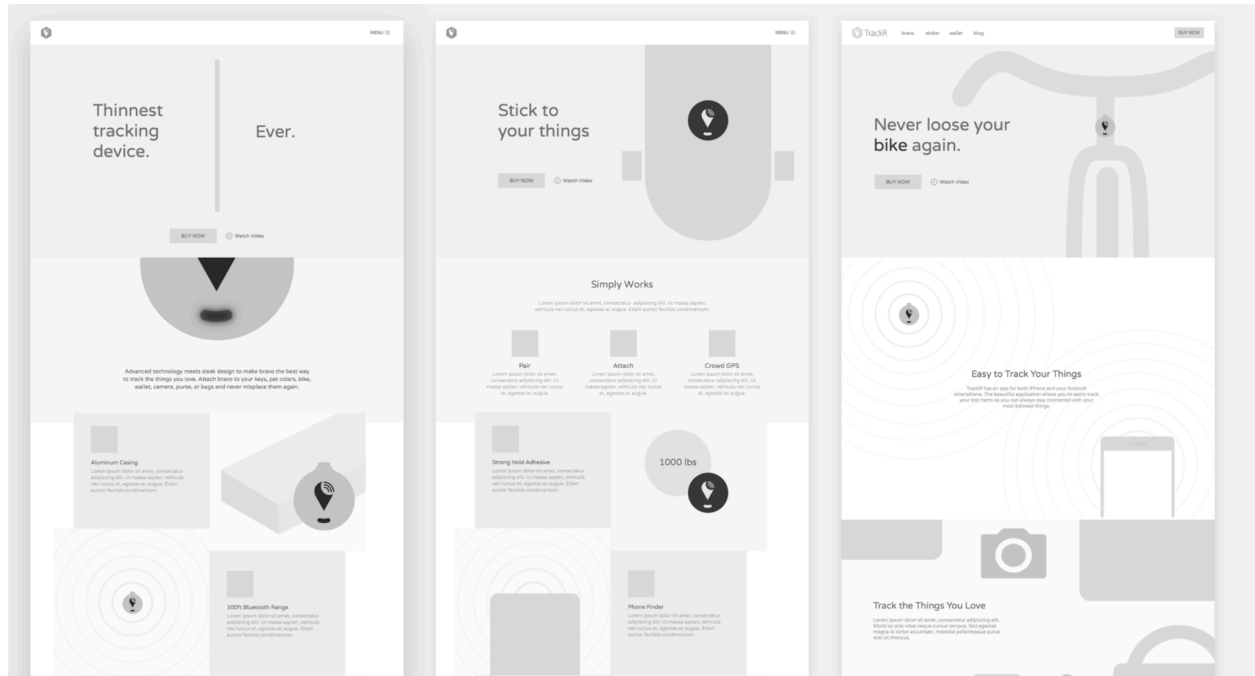

Concept

What do you want to feel when you sit on a chair?

Typically you want to feel comfortable and supported. The specific sensations or feelings can vary from person to person, but comfort and stability are generally desirable when sitting on a chair.

The objective was to build a chair suitable for various settings, including dining and living room spaces, characterized by its clean, elegant design and ergonomic efficiency.

Quick Ideation using Procreate and sketchbook for variations helped me discover different designs

This is process of generating ideas and concepts through creative thinking. Brainstorming,conceptualizing and exploring different possibilities that resulted in multiple initial sketches.

Prototype / Development

Building mockups help fully understand how the product will actually look like.

This will provide room for iterations, refinement and development of the product

Prototype will provide a sense of scale of the product.

This is helpful to determine the dimensions and details.

Throughout the design process, careful attention has been paid to every detail, from the chair's aesthetics to its comfort and effectiveness in fulfilling its intended purpose. The goal was not just to create a piece of furniture but to craft a functional work of art that seamlessly blends form and function.

The design process was a rewarding journey that emphasized the balance between aesthetics and ergonomics. Observational research into dimensions and seat angles revealed the science of creating a comfortable chair and its impact on well-being. The iterative design process and user testing underscored the importance of continuous improvement. Overall, the project deepened the appreciation for user-centered design in achieving a harmonious blend of form and function in furniture.
