

Ergo

An ergonomic handheld
polaroid camera

Ideation / CAD

Enhanced User Comfort:

improve the camera's grip to ensure that users can hold it comfortably for extended periods, reducing hand fatigue and enhancing their overall experience.

Improved Handling: provide a secure and stable grip on the camera, allowing users to have better control and stability while taking photos, especially in challenging shooting conditions.

Grip

Polaroid camera with an improved grip involves a user-centered approach to create an ergonomic design that is comfortable. It should prioritize grip design. User testing and customization options can enhance the design's effectiveness, ensuring a secure and enjoyable photography experience.

The success of the project to design a Polaroid camera with an improved grip can be measured through user satisfaction and accident reduction. Key reflections and lessons learned include the value of a user-centered design approach, and ensure continuous improvement in product design and development processes.
